```
!qit
usage: git [--version] [--help] [-C <path>] [-c <name>=<value>]
           [--exec-path[=<path>]] [--html-path] [--man-path] [--info-
path]
           [-p | --paginate | -P | --no-pager] [--no-replace-objects]
[--bare]
           [--git-dir=<path>] [--work-tree=<path>] [--
namespace=<name>1
           [--super-prefix=<path>] [--config-env=<name>=<envvar>]
           <command> [<args>]
These are common Git commands used in various situations:
start a working area (see also: git help tutorial)
             Clone a repository into a new directory
   clone
             Create an empty Git repository or reinitialize an
   init
existing one
work on the current change (see also: git help everyday)
   add
             Add file contents to the index
   mν
             Move or rename a file, a directory, or a symlink
             Restore working tree files
   restore
             Remove files from the working tree and from the index
examine the history and state (see also: git help revisions)
             Use binary search to find the commit that introduced a
bug
   diff
             Show changes between commits, commit and working tree,
etc
             Print lines matching a pattern
   grep
             Show commit logs
   log
             Show various types of objects
   show
             Show the working tree status
   status
grow, mark and tweak your common history
   branch
             List, create, or delete branches
             Record changes to the repository
   commit
             Join two or more development histories together
   merge
             Reapply commits on top of another base tip
   rebase
             Reset current HEAD to the specified state
   reset
   switch
             Switch branches
             Create, list, delete or verify a tag object signed with
   tag
GPG
collaborate (see also: git help workflows)
             Download objects and refs from another repository
   fetch
   pull
             Fetch from and integrate with another repository or a
local branch
   push
             Update remote refs along with associated objects
```

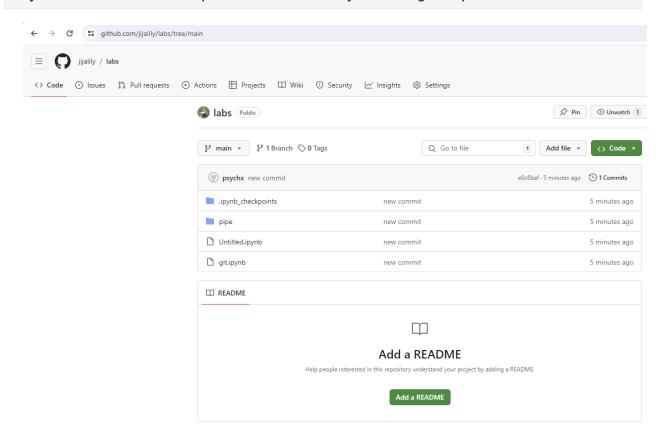

'git help -a' and 'git help -g' list available subcommands and some concept guides. See 'git help <command>' or 'git help <concept>' to read about a specific subcommand or concept.
See 'git help git' for an overview of the system.

Далее я сгенерировала ключ используя команду ssh-keygen и добавила его в настройки

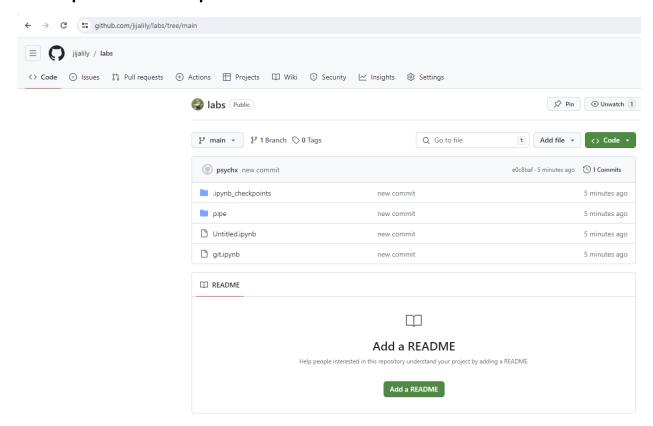

ssh-rsa
